

What's_new_on_GenePattern

- **GenePattern workshops** will be held: **February 4 & 11, 2009** from 9am-5pm at the Broad Institute in Cambridge, MA. Register [here](#).
- **GenePattern 3.1.1** was released on 7/21/08, containing a number of improvements in display speed, increase in the size of files that can be analyzed, and enhanced broadcast messaging to users. See the [release notes](#) for more information.
- The **GISTIC** (Genomic Identification of Significant Targets in Cancer) module has been released on the [public GenePattern server](#). GISTIC analyzes SNP copy number data to identify chromosomal regions containing significant broad and focal amplifications or deletions. The method is described in [Beroukhi et. al, PNAS vol. 104 no. 50 2007-20012](#).
